

Alpen Associates Rebrands to Alpen Systems to Bridge Strategic Advisory and AI-Driven Project Delivery

SALT LAKE CITY, Utah — May 6, 2026 — Alpen Associates, a boutique consultancy in the capital projects and infrastructure sector, today announced its official rebranding to **Alpen Systems**. This transformation marks the evolution of the firm's capabilities and talent acquisition to drive advanced system integration of artificial intelligence solutions for its clients (AlpenSystems.ai).

The move to Alpen Systems reflects a shift in the capital projects landscape where clients tackling major capital investment projects require tools that accelerate speed-to-market. By rebranding, the firm emphasizes its ability to not only provide trusted data analysis and planning support, but also to deploy the systems that ensure projects are built successfully.

A Strategic Partnership with Foresight Works

A cornerstone of the new brand is Alpen Systems' recent partnership with [Foresight Works](#), the preeminent AI-driven scheduling and project delivery platform globally. As Foresight's [official Implementation Success Partner](#), Alpen Systems provides the technical expertise to embed Foresight's predictive AI into the planning and performance of complex development projects—predicting risks before they occur and accelerating project delivery.

Full-Lifecycle Advisory: From Planning to Close-out

While the rebranding highlights a deepened technical capability, Alpen Systems remains a trusted partner for executive decision-makers in the planning stages of the capital project lifecycle. The firm continues to provide robust services in:

- **Capital Investment Evaluation:** Guiding executives through the complexities of billion-dollar investment decisions.
- **Market Entry & Site Selection:** Analyzing economic landscapes to facilitate successful expansion into new sectors and geographies.
- **Fiscal and Economic Modeling:** Developing the rigorous financial frameworks that underpin sustainable infrastructure development.

“Rebranding as Alpen Systems recognizes that the future of infrastructure is digital and driven by data,” said Scott Cuthbertson, CEO and Founder. “AI is just a tool, and its value depends on the expertise of the people using it. Our team of data scientists, consultants, and industry veterans helps clients connect technology with operations by embedding AI into workflows to increase speed and efficiency”.

About Alpen Systems

Alpen Systems provides strategic delivery platforms for the capital projects and infrastructure sector. The firm brings over 150 years of combined leadership in consulting, development, and executive advisory to provide operational consulting paired with AI implementation. This approach helps clients optimize asset performance and project delivery with speed and precision. By bridging strategic insight with technical execution, the firm supports complex investments throughout the project lifecycle.

About Foresight Works

Foresight Works is a global AI project delivery platform providing advanced predictive analytical tools. The technology integrates into the planning and performance phases of complex construction projects to identify risks before they occur and accelerate delivery timelines. This allows project teams to manage major infrastructure investments with greater speed and precision.
